

Viewpoint Construction Software responds to increasing demand for software with new Channel Partner Program.

PORTLAND, OR – March 10– Viewpoint Construction Software’s new Channel Partner program is designed for those interested in selling one of the industry’s most rock-solid, contemporary platforms, and thriving on creating wow and delight for their customers. Additionally, Viewpoint Construction Software Channel Partners will have the opportunity to cultivate a loyal customer base by offering both implementation and ongoing consulting services due to the flexibility, capability, and configurability of the software.

Viewpoint products are designed to seamlessly integrate accounting and project management so as to minimize inefficiencies across different areas of the construction business. Viewpoint Chief Operating Officer, Jim Paulson states: “For over 30 years we have been developing a comprehensive set of features and functionality to meet the needs of mid-to-large sized contractors. Viewpoint’s V6 software is based on a modern SQL, .NET technology platform, providing superior performance and enhanced productivity through an integrated accounting, project management and web portal. We are looking to take advantage of our market leading software solution by expanding our market reach through a small group of selected channel partners in strategic geographic locations in the U.S.”

For more information on becoming a Viewpoint Construction Software Channel Partner, contact Miles Haladay, Channel Sales Manager at 971.255.4653 or MilesH@viewpointcs.com.

About Viewpoint Construction Software:

With a long-standing focus on the issues and challenges facing mid to large-scale contractors, Viewpoint Construction Software has carved out a unique position in the business software marketplace. Instead of pointing our resources towards the development of generic business solutions, we have focused our attention on solving the unique need of construction professionals.

This means working closely with our customers to gain the specific insights we need to adapt our software to new industry conditions. The results, products that are built to scale with our customer’s business, yet not force them to invest in infrastructure that outpaces their current needs. And most importantly, it means building a software platform as rock-solid as the foundations our customer’s build their roads, bridges and buildings upon.
